Thanks Mary Anne. Randy told me he was interviewed but that was fast! Now we have 2 articles this Fall.

Not a bad article, but one aspect of it may be misleading. A Feasibility Study (FS) is mentioned as coming out today. However, that FS has nothing to do with PFAS. Its for a munitions area called the OD Grounds. Mention of a public hearing with respect to that FS, which would actually be on the follow up document (a Proposed Plan for a remedy), likewise was for the OD Grounds, not PFAS. An FS for PFAS will be quite a ways off due to a number of factors.

I recently formally asked the Army, and they agreed, to do a Preliminary Assessment (PA) to look into whether there are other potential sources of PFAS at the former Depot. A PA mainly consists of a records search and interviews related to storage and spills, in this case of AFFF (the fire fighting foam). Based on results of the PA, additional sites could be sampled.

Also, as soon as I get time and can formulate appropriate wording, I plan to ask the Army to do a full private well survey both on and off the former Depot property. I have already spoken with the Army about this and they were amenable to it.

So things are moving, and the Army will finally be catching up to the other military branches with respect to PFAS investigations.

Have a great weekend.

Bob
